Stylistically, Tudge writes in a practical, disarming prose that is a refreshing contrast to the turgid voice favored by both alarmists and enthusiasts. The book is written in a very intellectual manner, which of course means much larger words than are needed are used. He has a special interest in natural history in general, evolution and genetics, food and agriculture, and spends a great deal of time on philosophy especially moral philosophy, the philosophy of science, and the relationship between science and religion.
