Ultrasound-Guided Fine Needle Aspiration Biopsy of the Thyroid

A fine needle aspiration biopsy of a thyroid nodule is a simple and safe procedure performed in the doctor's office. Typically, the biopsy is performed under.

Thyroid fine needle aspiration (FNA) - InsideRadiology

Steps to diagnose malignancy should include a careful clinical evaluation, laboratory tests, a thyroid US exam and a fine-needle aspiration.

Thyroid nodule fine needle aspiration biopsy is generally carried out in the setting of a palpable nodule or ultrasound-detected thyroid nodule.

OBJECTIVE. Fine-needle aspiration biopsy (FNAB) is the current primary test to risk stratify thyroid nodules. However, in up to one third of biopsies, cytology is.
