Pesticide residues Total Diet Studies the total diet in Canada. To date, TDS is one of the most efficient tools for ensuring food safety; risk managers can make decisions based on the background information of chemicals in food provided by TDSs. In Korea, TDSs have been conducted to estimate dietary intakes of heavy metals, pesticides, mycotoxins, persistent organic pollutants, and processing contaminants. SupportCenterSupportCenter.Countriesmayalsowishtorefertothelistof It is also recommended that future TDS training courses be held with a particular focus on building TDS capacity in low-income countries. The food list has been expanded, and the number of chemicals tested has increased since the Korean TDS master plan was established in Riskassessmentisakeyinputinriskanalysisandcomprisesfourelements:T is important to harmonise methods for dietary exposure risks worldwide, and TDS-Exposure will standardise methods for food sampling, analyses, exposure assessment calculations and modelling, priority foods, and selection of chemical contaminants.
