Journal Cost-Outcome Methods for Mental Health Social Service Research. Another important aspect to be considered in costs estimation is the cost perspective - that is, from whose viewpoint expenses are being measured societal, Ministry of Health, employers, insurers. The results regarding the association among performance indicators reveal that outcome and cost per outcome lead to more similar rankings than outcome and duration per outcome, especially when we consider cost per improved or cost per recovered patient. Morbidity costs are those caused by the effects of the symptoms of mental disorder. A detailed description of the entire chain of events that may occur, Cost-Outcome Methods for Mental Health be provided by a decision tree. At the patient level, irrespective of service provider, the association between outcome and duration or cost is no longer. There is quite some variation among providers regarding structural factors some providers are large institutes providing a mix of inpatient and outpatient care, whereas other provide only outpatient treatment and claim to abide better to clinical guidelines for short problem-focused treatments There is variation in process factors as well possibly due to different theoretical approaches. In the denominator, effectiveness is represented by the difference between inspection reveals that more patients are reliably changed and recovered by service providers 1 and 2 and less by service providers 6 and 7.
