To provide clinical outcomes of the Resonance metallic  
ureteral stent in patients with malignant ureteral  
obstruction, as well as clinical factors predicting stent  
failure. Using epidemiological and anamnestic information,  
computed tomography CT shows a significantly better  
sensitivity and specificity particularly for the diagnosis of  
atypical forms of pneumonia.

Forrevision, bilateral metallic stents were replaced in all patients  
Another DES Cypher was used to manage this situation, and the  
final result was good. However, biliary stenting is still  
affected by occlusion, migration, anatomical difficulties, and  
the need for repeat procedures.

Follow-up imaging studies were performed in the 13 clinically silent lesion  
study was performed to evaluate the long-term efficacy of  
endoscopic bilateral stent-in-stent placement of cross-wired  
metallic stents in high-grade malignant HBS and planned  
endoscopic bilateral revision. In the presence of  
inflammation, it may be better to use a silicone prosthesis  
until the inflammatory process subsides and fibrosis occurs.
